The IAEA establishes safety standards for the protection of people and the environment from harmful effects of ionizing radiation. The Safety Standards Series comprises three categories: Safety Fundamentals, Safety Requirements and Safety Guides. The safety standards are developed with the involvement and agreement of all Member States and cover nuclear safety, radiation safety, transport safety, waste safety, emergency preparedness and response. While recognizing that regulating safety is a national responsibility, the IAEA encourages all Member States to apply the safety standards' principles, requirements and guidance in order to maintain and improve nuclear safety and radiation protection globally.

The safety standards are available online at https://www.iaea.org/resourcessafety-standards and can be ordered in hard copy from sales.publications@iaea.org.

An Online User Interface (OSS-OUI), available at https://unesdoc-ops.iaea.org/has-oui, allows users to navigate and search the content of the publications in the Safety Standards Series and the Nuclear Security Series.
